Fashion-MNIST Autoencoder: Output Preview

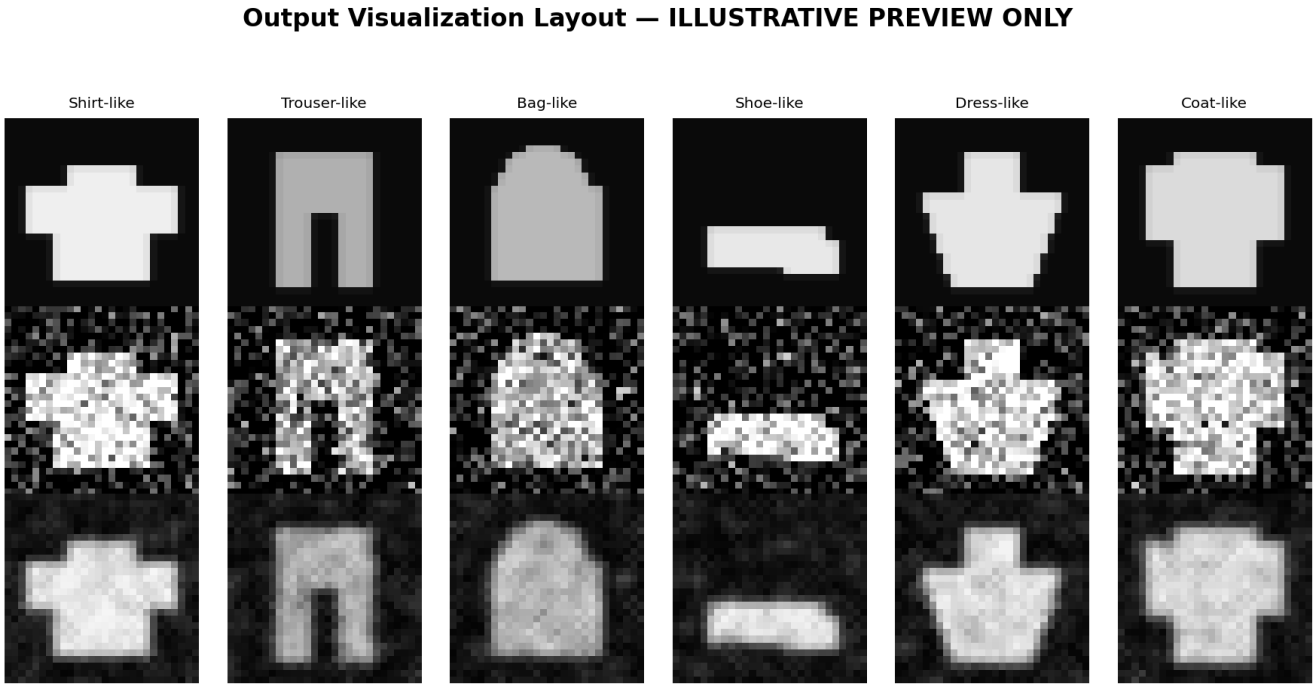

Important: This is a visualization preview, not a completed model run. The Fashion-MNIST dataset could not be downloaded in this environment, so no real test MSE values or trained-model output images are claimed here.

1. Model architecture

Train by minimizing pixel-wise Mean Squared Error (MSE)

2. Expected image-output layout

These are schematic placeholders, not Fashion-MNIST samples or trained-model predictions.

The schematic image grid demonstrates the intended layout: clean input, noisy input, and reconstructed output. The actual notebook generates real outputs when run in Google Colab or a local Python environment with Fashion-MNIST available.

3. Actual results to record after running the notebook

Latent dimension	Dimensional compression ratio	Measured test MSE
8	98:1	Fill from notebook
32	24.5:1	Fill from notebook

64	12.25:1	Fill from notebook
Denoising, k=32	24.5:1 latent dimensions	Fill from notebook

To obtain real output screenshots: open the notebook in Google Colab, run Runtime → Run all, then save the notebook with its output cells. If the dataset download fails, retry when internet access is available.
